Interfaces and Transceivers

Overview

ST's portfolio of **interfaces** includes **standard interfaces** (such as RS-232, RS-422, RS-423, RS-485, LVDS, and USB), **I/O expanders, level translators**, application-specific **interfaces** for smart cards and **Ethernet**, and **IO-Link Transceivers**.

RS232	RS485	USB	Smartcard Interfaces
			
Transceivers with auto-power-down, standby functions and high ESD protections.	Low-power, high speed transceivers with high protection level from 16 up to 256 nodes.	Products designed for USB data (transceivers) and/or power delivery applications (battery chargers and charger detection).	Asynchronous 1.8V, 3V and 5V smartcards interfaces.
I/O Expanders & Level translators	Power Line Transceivers	Darlington Arrays	IO-Link Transceivers
			
I/O expanders, Interface between multi-voltage chipsets and system I/Os.	Come with an extensive toolbox that includes evaluation boards, software and certified protocol stacks, providing designers with a comprehensive development environment.	High-voltage, high-current switch arrays containing multiple open-collector Darlington pairs or multiple Darlington transistors.	IO-Link is a factory automation fieldbus-independent communication standard dedicated to connecting sensors and actuators.

Darlington Arrays

Overview

Darlington devices are high-voltage, high-current switch arrays containing multiple open-collector Darlington pairs or multiple **Darlington transistors** with common emitters, and integral suppression diodes for inductive loads. The nominal current rating of each output is 500 mA for the 7- and 8-output devices and up to 1.5 A for quad-output devices. The inputs are pinned opposite the outputs to simplify the application board layout. These devices interface **standard logic families**.

Interfaces and Transceivers/Darlington Arrays

I/O Expanders and Level Translators

Overview

ST's **Xpander family** of general-purpose input/output port expanders are used to interface digital ASICs via a two-line bidirectional bus (I²C). ST's dual-supply **level translators** are used as interface between multi-voltage chipsets and system I/Os, ranging from 5.5 V down to 1.2 V.

A companion device that expands:

- Input/output capability
- Control capability
- Mixed signal capability

Interfaces and Transceivers / I/O Expanders and Level Translators/Level Translators

Part Number	General Description	Package	Number of Bits Supported nom	Supply Voltage (V) min	Supply Voltage (V) max	Device Speed (tpd) (ns) nom	Vi Range
ST2378E	8-bit Dual supply 1.71 V to 5.5 V level translator with I/O VCC +/-15 kV ESD protection	TSSOP-20	8	1.71	5.5	15	0 to Vcc

IO-Link Transceivers

Overview

IO-Link is a Factory Automation fieldbus-independent communication standard dedicated to connecting sensors and actuators as described in the IEC 61131-9 standard. Easily integrated with any of the most commonly used communication protocols found in factory automation systems through dedicated interfaces or bridges, it is a simple solution for extending existing networks to connect remote sensors and actuators. Developers will take full advantage of the Industry 4.0 or Industrial Internet of Things (IIoT) concept where every sensor and associated data point is used to control and optimize even the most complex industrial processes in real time.

ST's and enable a master and device solution for IO-Link and general-purpose (SIO-mode) transceivers via a single 3-wire connection (PHY2) supporting COM1 (4.8 kbaud), COM2 (38.4 kbaud) and COM3 (230.4 kbaud) modes.

The half-bridge output stages can be configured as high-side, low-side or push-pull for maximum design flexibility. The two ICs meet all the remote service, standardization, functionality verification, diagnostics and monitoring requirements of the latest sensors and actuators and are suitable for all automation systems.

Key Features

Wide application spectrum

- Wide supply voltage range: 18 to 32.5 V (L6360), 7 to 36 V (L6362A)
- High output current capability: up to 500 mA (L6360), 220 mA (L6362A)

Maximum design flexibility

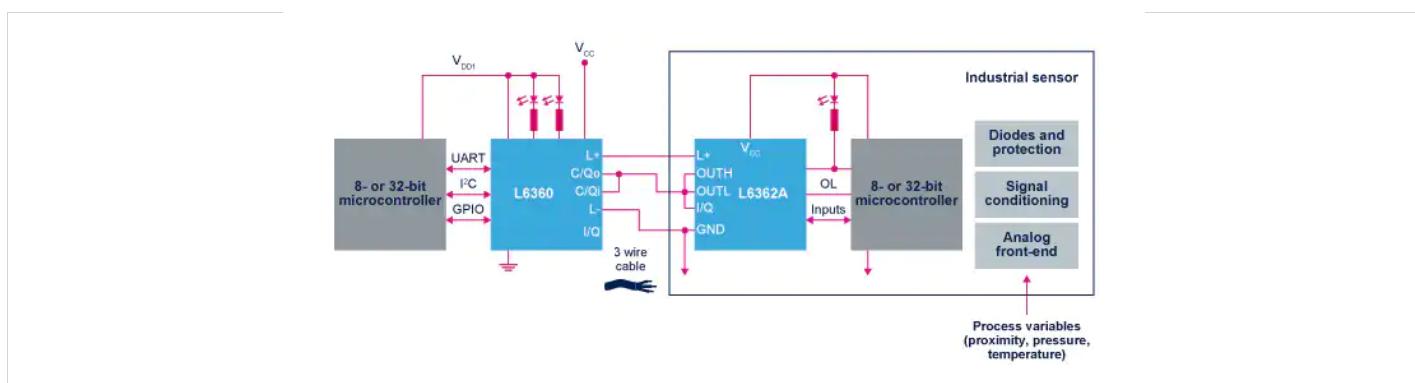

- Selectable output stage: high-side, low-side, and push-pull
- Easy access and full configurability in I₂C mode with L6360
- Selectable linear regulators: 3.3 / 5 V 50 mA (L6360), 10 mA (L6362A)

Minimum power dissipation and maximum efficiency

- Best-in-class $R_{DS(on)} < 1.6 \Omega$ (L6362A), $< 2 \Omega$ (L6360)

Maximum reliability

- Full set of protection functions
- LED diagnostics sequence for fast reaction to fault conditions

Interfaces and Transceivers/IO-Link Transceivers

Part Number	General Description	Package	Digital Inputs	Supply Voltage (V) max	Supply Voltage (V) min	Supply Voltage (V) typ	Input Voltage (V) max	Output Current (A) max
L6360	IO-Link communication master transceiver IC	VFDFPN 26 3.5x5	1	32.5	18	24	36	0.5

Isolated Interfaces

Overview

Isolate high-speed digital signals with ST's robust, reliable and flexible digital isolated interfaces.

Explore new ST digital isolators to transmit high-speed bit streams up to 100 Mbps over the isolation barrier for high-performance industrial applications working in harsh temperatures and system noise.

ST's digital isolators leverage our 6kV thick-oxide galvanic-isolation technology to transfer data between isolated domains in a variety of industrial applications, providing lifetime reliability and high-voltage protection.

STISO621: a new digital isolator outperforming conventional optical isolators

The first release, the dual-channel digital isolator, features two independent channels with Schmitt trigger inputs that ensure high noise immunity and keeps pulse distortion below 3ns. With a maximum data rate of 100Mbit/s, 6000V impulse withstand voltage (VIOTM), and 1200V maximum repeating isolation voltage (VIORM), the STISO621 ensures faster data transmission, longer lifetime, and higher reliability than conventional optical isolators.

Dedicated evaluation boards to get started

To help developers get their design to market more quickly, the lets you get started exploring the STISO family of dual-channel digital isolators.

Combining low-cost sensors and robust galvanic isolation, the integrates the and the advanced STISO621 digital isolator, with customizable turn-key firmware running on STM32 microcontroller to compute metrology and power-quality data. The sensing circuitry and PCB layout are optimized to ensure robustness against EMI, and a strong signal-to-noise ratio for high-accuracy measurement and post-processing computation.

Interfaces and Transceivers/Isolated Interfaces

Part Number	General Description	Number of Channels	Isolation Voltage (kV) max peak	V _{IOTM} (kV) max	CMTI (V/μs) min	Data Rate (Mbps) max	Supply Voltage (V) min	Supply Voltage (V) max	Package
STISO620	Dual channel digital isolator	2	1.2	4	50000	100	3	5.5	SO-8
STISO621	Dual channel digital isolator	2	1.2	6	50000	100	3	5.5	SO 8 WIDE 300,SO-8

Power Line Transceivers

Overview

Since the early 90s, ST is committed to supporting advances in **narrow-band power-line communication** (PLC) technologies that are now largely adopted by Automatic Meter Reading (AMR) and Automatic Meter Infrastructures (AMI) solutions at the heart of the Smart Grid concept.

Our large and expanding offer ranges from analog **FSK transceivers** with an integrated power-line driver to multi-core, multi-protocol, system-on-chip platforms with integrated power-line driver, analog front-end and AES encryption that support B-FSK, B-PSK, Q-PSK, 8-PSK and OFDM modulations.

The fully programmable, multi-core **STCOMET** integrates a programmable modem, the AFE, the power-line driver and the application micro-processor together with a fully-integrated smart meter SoC that embeds high-performance metrology functions.

To cope with the Smart Grid networks of the future, which will be multi-layered and multi-dimensional to manage the complexity of smart energy systems with bidirectional communication and power exchange between suppliers and consumers, the new multi-standard, programmable and ultra-low power **powerline communication platform**, along with the , provides the highest performing, lowest power solution and flexibility for modular communication architectures.

To further encourage sustainable technology in Smart Homes and Buildings, ST also offers , a tiny transceiver certified to work on the KNX international building control standard that enables the integration and programming of sensors or actuators in home and building automation networks.

Evaluation boards and software, together with certified protocol stacks, provide designers with a comprehensive development environment enabling easy integration into new and existing designs and shorter time to market.

CENELEC B-certified Turnkey PLC chipset for smart-energy infrastructure

ST's new powerline communication (PLC) platform consists of the ST8500 system-on-chip that includes a powerline modem, higher layer communication stack, PLC analog front end and other peripherals along with the STLD1 companion chip that provides the line driver (power amplifier) function.

Key features and benefits:

- Fully programmable real-time 400 MHz DSP and 200 MHz ARM® 32-bit Cortex®-M4F core, to meet today's and the future's smart grid requirements
- Ultra-low power-supply consumption <100 mW in Receive mode for the highest energy efficiency operations
- Embedded AES cryptography engine, supporting up to 256-bit security key and multi-security modes to satisfy the most stringent requirements in terms of data security
- Full 500 kHz bandwidth support for the best exploitation of worldwide bandwidth (CENELEC, ARIB, FCC)
- Operating temperature range up 105 °C suitable for critical applications

Interfaces and Transceivers/Power Line Transceivers

Part Number	General Description	Package	Communication standards supported	Data Bit Rate (Bd) typ	High-Level Output Current (A rms) typ

RS-232

Overview

The **RS-232** family includes **transceivers** with auto-power-down and standby functions, multi-channel interfaces and driver/receiver circuits. These devices have a 5 V supply or a 3 V to 5 V supply and are ESD protected enabling true **RS-232** performance.

RS-422 RS-423 RS-485

Overview

The low-power, **high-speed transceivers** of this family are designed for **RS-485**, **RS-422** and **RS-423** communication applications. They usually contain one driver and one receiver in half duplex configuration. Each driver output and receiver input is protected against electrostatic discharge up to ± 15 kV and has no latch-up. These **transceivers** operate with a 5 V supply and draw a very low supply current when unloaded or fully loaded but with disabled drivers.

A interface controller for industrial control systems enables **real-time communication** via optical fiber rings, RS-485 rings and RS-485 buses.

Low-power RS-485 transceiver with selectable data rate and compatible with 1.8 V I/Os

A 3.3 V differential line transceiver for RS-485 data transmissions in half-duplex mode, the STR485LV includes an external slew rate select pin able to switch between a fast data rate up to 20 Mbps or a slow data rate up to 250 kbps for longer cables.

Able to interface directly with voltage logic from 1.8 to 3.3 V, this differential driver/receiver is robust over fast transient burst **IEC61000-4-4 Class B conditions** and the bus pins withstand over ± 8 kV contact discharge and ± 16 kV air discharge conditions without latch-up, exceeding IEC 61000-4-2 specifications.

Available in a small (3 x3 mm) DFN10 package with a temperature range from -40 up to $+105$ °C, the **STR485LV** is a perfect fit for a wide range of applications including telecom infrastructure, high-speed data links, and low-voltage microcontroller communications.

Smartcard Interfaces

Overview

ST offers complete **analog interfaces** for asynchronous 1.8 V, 3 V and 5 V **smartcards**. They can be placed between the card and the microcontroller with only a few external components to perform all supply protection and control functions. Main targeted applications are **smartcard readers for set-top boxes**, IC card readers for banking, identification and pay TV.

They comply with several standards including ISO 7816, EMV and GSM, and are also certified by NDS for STBs.

USB

Overview

Universal serial bus, or USB, is an industry standard that defines the cables, connectors and communication protocols used to connect computers and peripherals. ST's portfolio covers a wide range of products designed for **USB** data (transceivers) and/or power applications (battery chargers and charger detection systems).

With the recent introduction of the **USB Type-C™** cable and connector specifications and USB power delivery standards, ST has developed new product families that help you develop innovative products and applications and re-invent the connectivity of tomorrow.

Interfaces and Transceivers / USB/USB Charging Controllers
