Radio Frequency Transistors

Overview

ST's RF transistors are manufactured using an optimized process layout designed to **improve RF performance**. They exhibit outstanding RF gain and power saturation, higher breakdown voltage, improved ruggedness and reliability (higher MTTF). These unique features result in **high-performance** and **cost-effective** solutions.

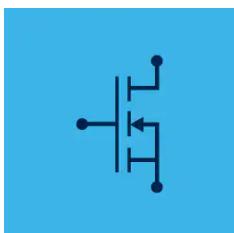

With more than 35 years' experience, ST offers a broad portfolio of Radio Frequency power transistors operating from 7 to 100 V. They are a perfect fit for applications ranging from 1 MHz to 4 GHz, such as:

- Industrial, Scientific and Medical (ISM)
- FM and TV Broadcast
- Mobile and wideband communications
- Avionics and Radar
- Telecom and Satellite Communications

Several package options are available, from SMD plastic to ceramic and ST's innovative STAC® air cavity package featuring 25% lower thermal resistance, improved RF performance and best-in-class reliability.

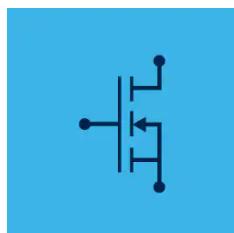

In addition to a wide range of evaluation boards and reference designs, ST offers software simulators and analysis tools to help engineers quickly get their designs to market.

RF DMOS

Featuring the best-in-class 50/100V RF DMOS power transistors operating up to 250 MHz for ISM applications.

RF LDMOS

Broad range of supply voltage and output power from 7 V to 50 V and from 1W to > 1 kW up to 4 GHz.

STPOWER RF DMOS Transistors

Overview

ST offers a broad portfolio of RF DMOS (double-diffused metal oxide semiconductor) transistors operating from a supply voltage ranging from 50 up to 100 V with high reliability (1 million power cycles). Targeting applications in the 1 to 250 MHz frequency range, our RF DMOS transistors feature high peak power (up to 1.2 kW) and high ruggedness capability (infinite:1 VSWR).

Based on an optimized process layout resulting in improved RF performance, ST's RF DMOS transistors are ideal for:

- RF plasma generators
- Laser drivers
- RF Heating & Defrosting
- Magnetic Resonance Imaging (MRI)
- HF transceivers
- FM broadcast

In addition to devices housed in ST's innovative STAC® air cavity package featuring a 25% lower thermal resistance, we also offers a range of moisture-resistant RF transistors available in gel-filled package, providing a cost-effective solution for equipment operating in high-moisture environments.

To help engineers quickly get their designs to market, we offer a wide range of evaluation boards as well as several software simulators and analysis tools.

STPOWER RF LDMOS Transistors

Overview

ST offers a broad portfolio of RF LDMOS (lateral double-diffused metal oxide semiconductor) transistors operating from a supply voltage of 7 to 50 V. They target applications in the 1 MHz to 4 GHz frequency range and feature high peak power up (>1 kW) and high ruggedness capability.

Designed to increase the transistor's power saturation capability, minimizing the distortion at higher power levels, our latest 28V & 50V LDMOS technologies feature improved RF performance (+3 dB, +15% efficiency), ruggedness and reliability.

- Target applications include:
- ISM & Broadcast
- Mobile & Wideband Comms
- Avionics & Radar
- Telecom & Satellite communications

Our PowerSO-10 plastic package is a high-power SMD package designed to offer high reliability and is specially optimized for RF needs and ease of assembly. Certain devices are also available in die form for chip-on-board (CoB) design.

In addition to a wide range of evaluation boards, ST offers several software simulators and analysis tools to help engineers quickly get their designs to market.
